

Bento

Mobile Developer Challenge

Thanks for your interest in joining Bento! 🎉 After our quick interview, we'd like you to take on a small design challenge.

Here's what we need from you:

- Develop two pages to closely match the original design.
- No API calls needed—mock data however you like.
- Images and icons can be swapped, just make sure it looks great.
- Ensure navigation from the home page to the item detail page works smoothly.
- Use a font that closely matches the design and respect font weights (bold, medium, etc.).
- We love animations—be creative and add some flair!
- To make it easier for us to review, please provide an APK or a URL where we can see your project in action.

We're keen to see how you tackle this challenge, including how you work with Git, handle changes, and explain your State Management choices. Once you're done, share your GitHub link with us.

Feel free to add comments, details, and even an APK to your repo. And remember, at Bento, it's all about the small details, so bring your A-game and aim to impress us with some "WOW effects."

Good luck! We can't wait to see what you create. 😊

On a personal note - Bento is a tough place to get into, but once you're here, you'll be part of the best technology platform in the Cayman Islands.

Design

- Home Page
- Item Detail Page
